

# 3mm Laparoscopy

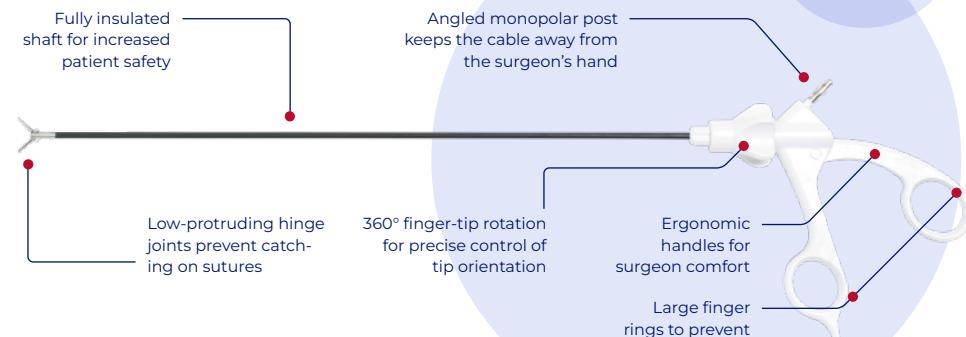

## 3mm Monopolar Graspers & Dissectors

Collection of high-quality 3mm monopolar graspers and dissectors. Lightweight and well balanced for long procedures, all instruments provide a high level of tactile feedback for increased control and have a standard monopolar connection. These are sterile and single-use instruments.

### Features and benefits

- Low-protruding hinge joints prevent catching on sutures
- Ergonomic handle for surgeon comfort
- Large finger rings to prevent finger fatigue
- 360° finger-tip rotation for precise control of tip orientation
- Fully insulated shaft for increased safety
- Angled monopolar post keeps the cable away from the surgeon's hand

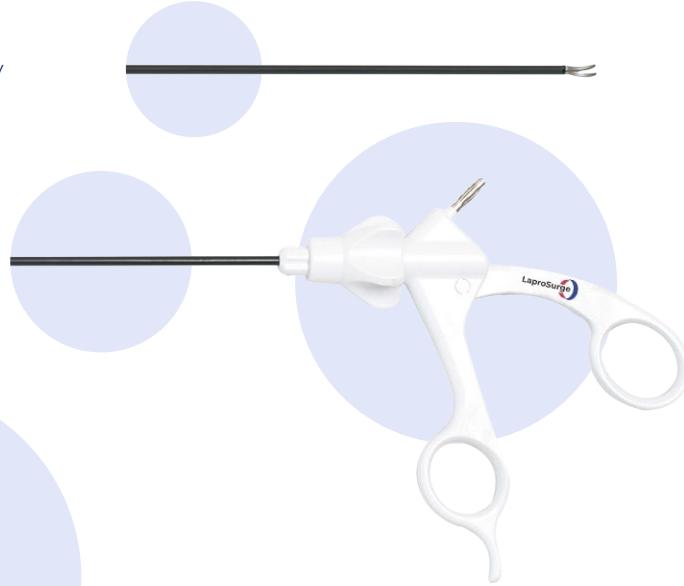

Product	Code	Action Type	Diameter	Jaw Length	Working Length	Quantity
Maryland Dissector	LG005-3S	Double	3mm	9mm	230mm	5
Johan Grasper	LG006-3S	Double	3mm	9mm	230mm	5

## 3mm Monopolar Scissor

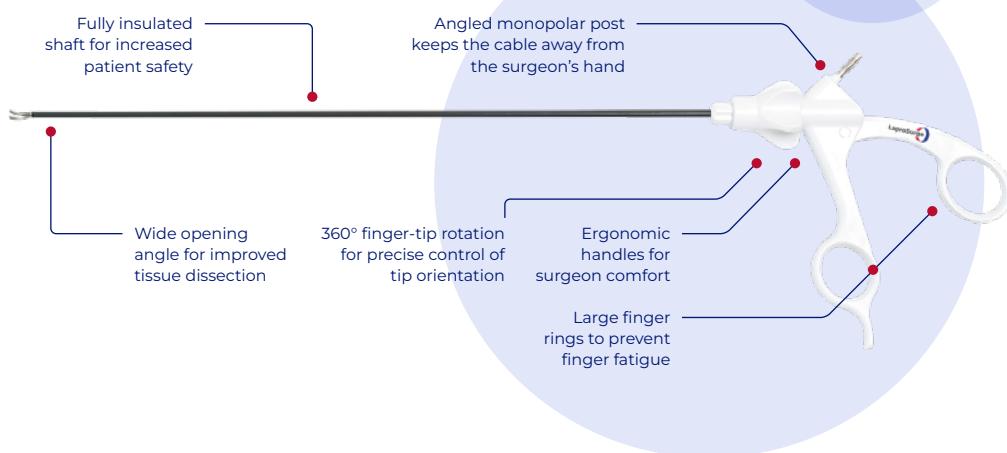

We manufacture great value double action 3mm monopolar scissors. Their curved blades increase visualisation of the blade tip during cutting. These are sterile and single use which guarantees a sharp blade every time, without the additional costs of sharpening and reprocessing. These include a monopolar connection.

### Features and benefits

- Ergonomic handle for surgeon comfort and control
- 360° finger-tip rotation for precise control of tip orientation
- Large finger rings prevent finger fatigue
- Wide opening angle for improved tissue dissection
- Fully insulated shaft up to the scissor blades for increased safety

Single-use  
scissors guarantee  
a fresh sharp blade  
for every surgery

Product	Code	Diameter	Blade Length	Working Length	Box Quantity
Curved Scissors	LS006-3S	3mm	10mm	230mm	5

## 3mm Monopolar Electrodes

3mm L-Hook monopolar electrodes for coagulation, transection, and dissection of tissue during laparoscopic surgery. Devices have a low-profile handle design for comfortable pencil grip and are equipped with a standard 4mm male plug connector.

### Features and benefits

- Less invasive procedure with the same technique
- Exceptional shaft rigidity provides high level of strength for tissue manipulation
- Available in the L-Hook tip design
- Low profile handle design for comfortable pencil grip
- Available in standard 330mm or shorter 230mm shaft lengths
- Double insulation along full shaft for safety
- All with monopolar connection

Product	Code	Diameter	Working Length	Quantity
L-Hook Electrode	HE003	3mm	330mm	10
L-Hook Electrode (Short)	HE003-S	3mm	230mm	10

## 3mm Cannulas & Trocars

The LaproSurge 3mm trocars, with either a dilating tip for reduced tissue damage, or a pyramidal tip, combine high abdominal wall retention with the low insertion force of small diameter trocars.

### Features and benefits

- Simple design to provide low-friction access for 3mm instrumentation
- Low profile cannula head reduces extracorporeal working space used
- Extremely lightweight to prevent drooping in abdominal wall

Bladed and  
bladeless trocars  
available

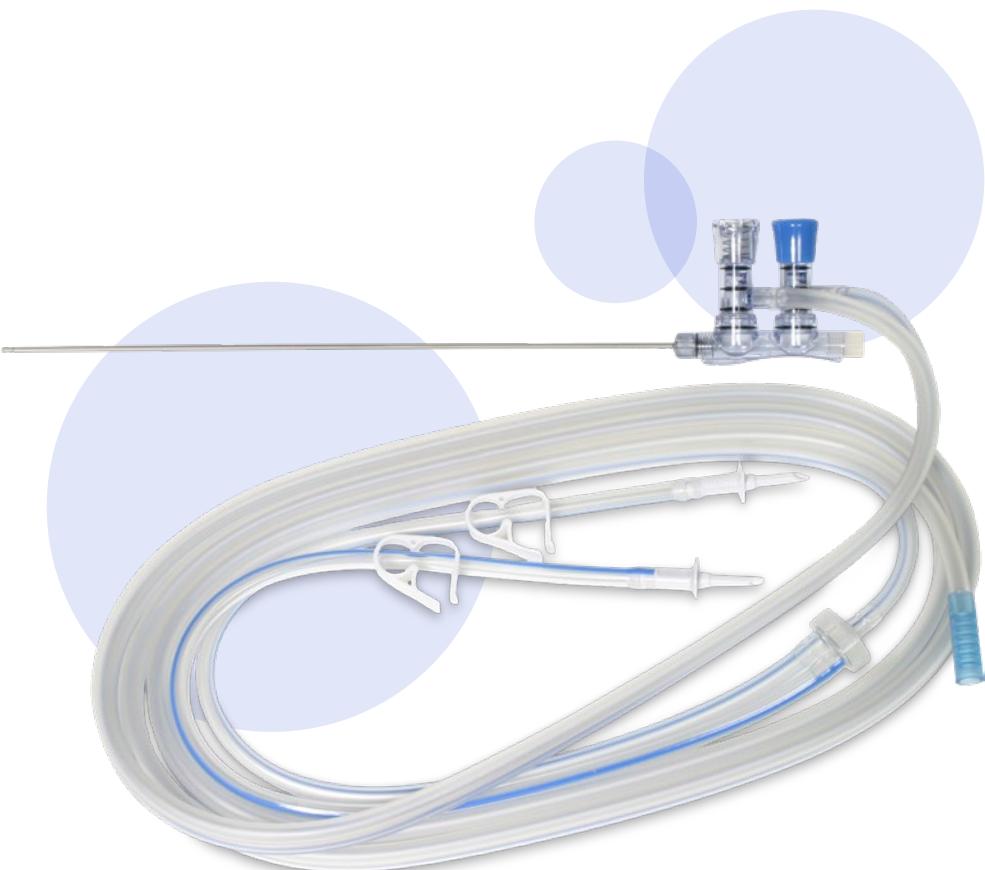

Product	Type	Code	Diameter	Cannula	Length	Pack	Box Quantity
Bladeless Trocar	Standard	EC3 SSBT (GT)	3mm	Threaded	60mm	Single	20
Bladed Trocar	Pyramidal	EC3 SSPT (GT)	3mm	Threaded	60mm	Single	20
Bladed Trocar	Pyramidal	EC3 SSP (GT)	3mm	Smooth	60mm	Single	20
Cannula	Standard	EC3 SST (GT)-C	3mm	Threaded	60mm	Single	20

## 3mm Suction Irrigation

3mm suction irrigation with ergonomic traditional trumpet-grip handle. The smaller diameter shaft provides a more concentrated spray for a more accurate irrigation.

### Features and benefits

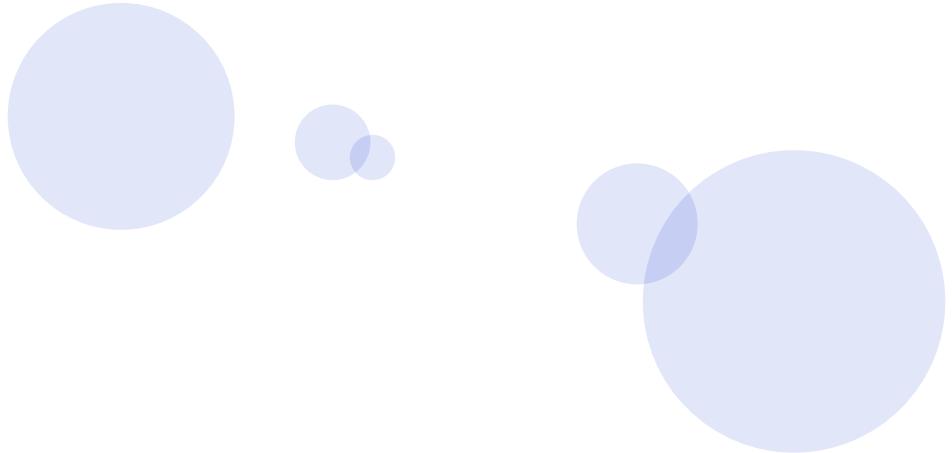

- Ergonomic traditional trumpet-grip handle provides comfort for all hand sizes and is also reversible for additional flexibility
- Suction and irrigation flows are controlled by colour-coded fingertip trumpet valves
- Controls are lubricated to reduce friction and ensure smooth and precise function control
- Screw thread for disconnection of 3mm probe if necessary — compatible with a range of interchangeable 5mm and 10mm probes and diathermy accessories
- Available with dual spike irrigation for rapid bag changes

The device features an ergonomic traditional trumpet-grip handle to provide comfort for all hand sizes. The suction and irrigation flows are controlled by fingertip trumpet valves, which are colour coded for easy identification. The controls are lubricated to reduce friction and ensure

smooth and precise function control. The device has wide internal channels to provide a high capacity, streamlined flow throughout the entire system and prevent blockages from blood clots or stones. The highly durable tubing is manufactured from a non-kink material with easy peel separation.

Product	Type	Code	Diameter	Working Length	Quantity
Suction Irrigation	Set	MD001-3	3mm	330mm	10

## 3mm Laparoscopy

The 3mm product range from LaproSurge enables surgeons to perform less invasive surgery without a compromise on the strength or rigidity of instruments. They provide undeniable clinical and cosmetic advantages without requiring the surgeon to alter operating technique. Accessing the abdominal cavity through 3mm ports has the benefit of reduced tissue damage, skin scarring, and pain scores as well as a reduction in port-site herniation and wound infection. This also sees faster recovery times. The high quality 3mm instruments from LaproSurge enable surgeons to achieve the ergonomics of conventional Laparoscopic triangulation with the numerous additional advantages of reduced incision-size.

**UK Manufactured,  
Globally Distributed,  
Minimally Invasive.**
