

Cannulas & Trocars

# Bladed Trocars

The bladed trocar is a sharp blade for cutting through tissue, housed within a bladeless tip. The outer plastic sheath acts as a shield to protect the blade when not in use. The locking mechanism provides additional safety by preventing the plastic sheath from exposing the blade once abdominal access has been obtained.

## Features and benefits

- Sharp blade with an outer plastic sheath
- Low insertion force
- Reduced peritoneal tenting during insertion
- Locking mechanism provides additional safety
- Available in 5mm, 10/11mm, and 12mm diameters and as a balloon or pyramidal trocar
- Tyvek packaging reduces space and waste per procedure
- Radiopaque markings ensure the distal tip shows up during X-ray
